

The goal of this web page is to have an API available to people who want to learn a little bit more about some pokemon or random ones. The organization of the content is meant to look like a DS since it is what I played pokemon on when growing up. The original design is much different from what I went with as i like to start easy and then add on if I have time at the end.

The desert used

(<https://www.deviantart.com/monsterrmmorpg/art/Pokemon-Style-Monster-MMORPG-Map-Central-Desert-259495461>). The forrest used

(<https://antonmr.blogspot.com/2021/03/pixel-pokemon-grass-background-pokemon.html>).

Finally the sea i used (https://pokemon.fandom.com/wiki/Hoenn_Route_105). If i were to make some updates i would like to make it so that the information shown to you looks as nice as the rest of the page does, right now it feels a bit underwhelming compared to the rest.
